

RBCopilot runs the whole job. Edgevanta only prices the bid.

A module-by-module inventory of the entire RBCopilot platform — bidding, field, compliance, quality, payment, closeout and the asphalt plant — measured against what Edgevanta actually offers.

VERDICT

Edgevanta sells a tool. RBCopilot runs the entire project.

Edgevanta helps an estimator put a price on a job. Once the contract is signed, its work is done. That is exactly where RBCopilot's begins: field, specifications, notices, RFIs, claims, quality, payment and closeout, with the asphalt plant wired into pay. **Everything that happens after the bid, Edgevanta doesn't touch.**

Capabilities in the full matrix (page 4)

RBCopilot

61.5 of 66 capabilities · 93%

Edgevanta

14.5 · 22%

49 of 66 capabilities exist **only** in RBCopilot. Partial = 0.5.

Only RBCopilot does

Offline field app, IP68 rugged devices, live project map, crews and hours, certifications, equipment and calibration, fleet, safety, spec answers cited by Division, notice countdowns, RFIs, claims, change orders, QC, pay items, retainage, closeout, plant.

Both do

PDF bid-item extraction, spec analysis, forms checklist, go/no-go brief, competitor intelligence.
Even here RBCopilot adds DBE, MOT, CPM, safety, subcontractors, proposal writer, a 30-point final auditor and takeoff.

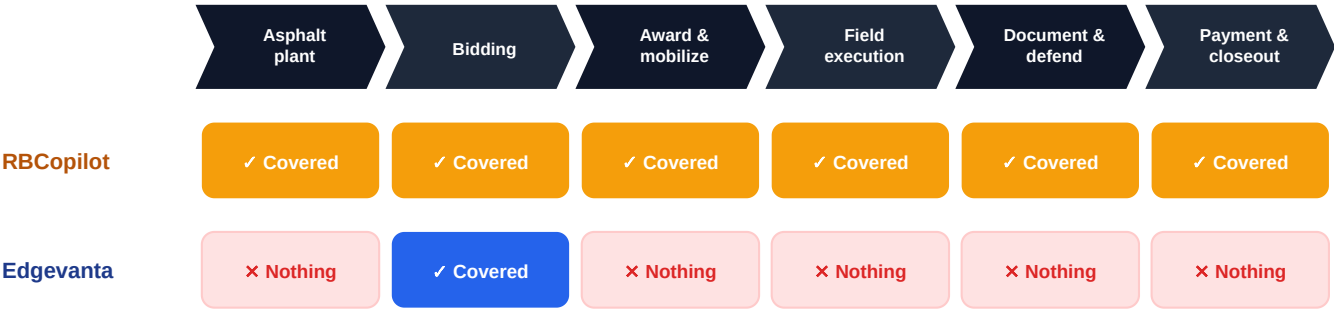

Only Edgevanta does

Bid-tab database across 45+ DOTs, liquid asphalt index adjustment and competitor backlog views. It is market intelligence — useful for pricing — but it **doesn't manage a single day on the job.**

01LIFECYCLE COVERAGE

Margin is won at bid time and lost on the job

RBCopilot's own site names seven margin leaks: expired notices, incomplete daily reports, weak RFIs, claims without evidence, poorly documented pay items, undetected bid risk and no field-to-pay traceability. **Six of the seven happen after award — where Edgevanta doesn't exist.**

MARGIN LEAK	HOW RBCOPILOT CLOSES IT	EDGEVANTA
Expired notices	Real-time §105.18.2 countdown with escalation Field Engineer → PM → Contracts → Executive	None
Incomplete daily reports	Missing-report detection across every crew; master report that rolls up crew reports	None
Weak RFIs	RFI Builder with automatic citations, SCDOT 10-field format, 14-day SLA	None
Claims without evidence	§105.18.7-compliant claim packets built from field events, photos and citations	None
Poorly documented pay items	Payment Backup “every dollar, ticket-traced”, earned vs paid, retainage, over/underruns	None
Undetected bid risk	13 agents, 5×5 risk matrix, risk rules, go/no-go	Partial
No field-to-pay traceability	Field event → spec → notice → pay item → RFI → audit packet	None

From the live demo (SCDOT I-85 project, \$47.8M): RBCopilot identified **\$284,750 recoverable** (\$118,640 subgrade, \$96,300 delay, \$69,810 change events) and lifted documentation health from **82% to 94%**. None of that is reachable with a bidding tool.

03

FIELD & OPERATIONS

Live with the jobsite. Edgevanta doesn't even have an app.

RBCopilot operational capabilities - right edge: Edgevanta equivalent

EDGEVANTA: 0 OF 12

**Offline field app**

EV x

RBCopilot Field PWA: saves on the device and syncs on reconnect; per-project and per-technician keys

**IP68 rugged tablets and phones**

EV x

RBC Field hardware with GPS + NFC, registered in Device Fleet

**Live project map**

EV x

Control Center with geolocated projects colored by severity

**Geotagged photos**

EV x

Coordinates and station (e.g. Sta. 214+20) on every photo

**Daily reports**

EV x

Crew, weather, work, quantities, photos and signature; missing-report detection

**Crews, shifts and hours**

EV x

11 trades; day/night shifts; clock-in and clock-out

**Timecards**

EV x

Pending, approved or rejected with an approval flow

**Technicians and certifications**

EV x

Alerts before a certification lapses; expired ones block QC

**Equipment and assets**

EV x

Paver, roller, milling machine, nuclear gauge...; calibration and maintenance

**Fleet and hauling**

EV x

Trucks, drivers, plants and load cycles

**Safety**

EV x

Toolbox talks, JSAs, incidents, near misses, PPE and corrective actions

**Crew dispatch**

EV x

Send jobs to the field, with a sync queue

Own hardware: RBC Field

- 10" rugged tablet and **IP68** rugged phone
- GPS + NFC, all-day battery, water and dust proof, built for gloves and sun
- Device Fleet: serial/IMEI, QR asset tag, warranty, assigned technician, last check-in, active/in-repair/lost status

Live Control Center

- South Carolina map with geolocated projects and severity-colored markers
- Compliance health gauge, alerts and deadline countdown
- Live panels for alerts, field reports, activity and inbox

04

DOT COMPLIANCE & EXPIRATIONS

Eight specialists that cite the spec

Every question goes through Classify → Retrieve verbatim text (hybrid semantic + keyword search) → Consult specialists → **Division 100 contract gate**. Nothing ships without a citation. Edgevanta has no agent that operates during construction.

SCDOT 2025 SPECIALIST	COVERS	EDGEVANTA
100 · General Provisions	Contract, claims, delay, scope, notice, force account	–
200 · Earthwork	Excavation, embankment, subgrade, proof rolling, differing site conditions	–
300 · Bases & Subbases	GAB, cement-modified subbase, compaction, thickness tolerance	–
400 · Asphalt Pavements	JMF, plant, paving, compaction, milling, segregation	–
500 · Concrete Pavement	PCCP, curing, joints, patching, opening to traffic	–
600 · Maintenance & Traffic Control	Lane closures, devices, signs, work-zone safety	–
700 · Structures	Bridges, steel, piles, drilled shafts, culverts	–
800 · Incidental Construction	Underdrains, riprap, guardrail, fencing, erosion control / SWPPP	–

Expirations & deadline control

 Contract notices EV ✗ §105.18.2 countdown and automatic escalation	 Obligation calendar EV ✗ AI-extracted: permits, certificates, calibration, QC plan, submittals, erosion, closeout	 Technician certifications EV ✗ Expiring in 90 days / expired / missing
 Equipment calibration EV ✗ Expired and expiring states	 Required documents EV ✗ Detects missing or expired: insurance, bonds, NTP, TCP, SWPPP	 RFI SLA EV ✗ 14-day response; alert at day 5

Edgevanta: its only “compliance” is checking that the bid package has every form and signature. Once the bid is in, there is no obligation calendar, no notices, no certifications and no submittals.

05

QUALITY, PAYMENT & CLOSEOUT

Where the contractor gets paid, Edgevanta is nowhere

Quality (QC)

- QC Manager mode: materials, tests, lots and non-conformances
- Asphalt, concrete and base tabs
- Lots and sublots with pay factor
- Control charts: density, mat temperature, AC content and air voids against UCL/LCL
- JMF and submittal risk flags before paving begins
- Inspections that raise NCRs

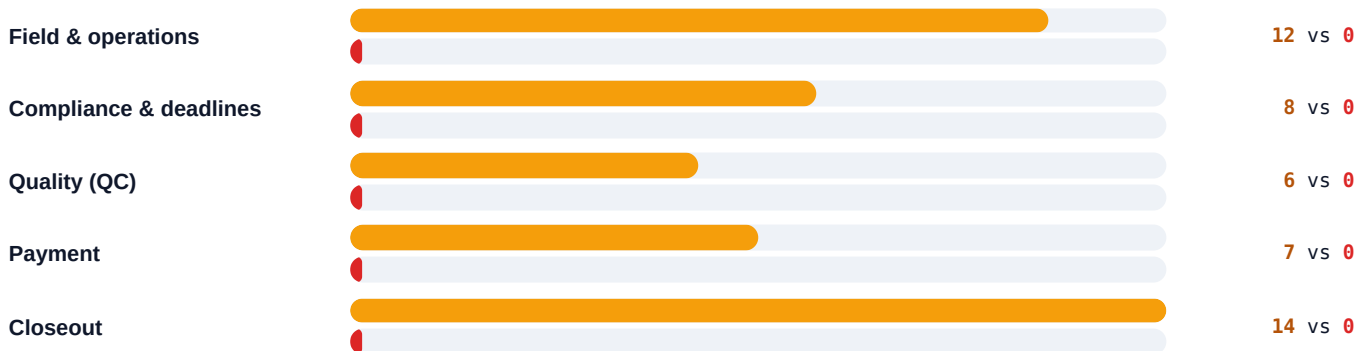

Payment

- Payment Backup: every dollar traced to its ticket
- Earned vs paid, underpaid items
- Retainage (5% of approved)
- Over/underruns; \$109.4 when a change order is needed
- Force account \$109.5
- Tickets and materials with OCR linked to pay items
- Penalties: pay factor, liquidated damages and root cause

Closeout

- Final quantities and as-builts
- Warranties and certifications
- Final inspection and punch list
- Material certifications and test reports
- Resolved RFIs and claims, final change orders
- Final pay estimate and lien waivers
- Subcontractor closeout and final photo log

Post-award coverage by stage

Number of features RBCopilot lists at each stage, vs Edgevanta.

A point the market confuses: Edgevanta has had “Pay Estimates” since August 2026, but these are *other* contractors' public payments in 4 states, used to watch their backlog. **It can't get your own job paid.** RBCopilot documents and defends *your* quantities.

06

BIDDING: EDGEVANTA'S ONLY TURF

Even on their home field, RBCopilot covers more

RBCopilot bid pipeline: orchestrator + 13 agents

AGENT	EDGEVANTA
Orchestrator (go/no-go)	—
1 · Intake & parser (28+ fields)	✓
2 · Eligibility (16 categories)	✓
3 · Items & pricing (10 checks)	✓
4 · DBE 49 CFR 26	—
5 · Technical scope (19 disciplines)	✓
6 · MOT / traffic	—
7 · CPM schedule	—
8 · Safety & environmental	—
9 · Subcontractors	—
10 · Risk (5×5 matrix)	⦿
11 · Proposal writer	—
12 · Final auditor (30 items)	⦿
13 · RFI drafting	—

Edgevanta: 6 agents + files

- Bid Tabs (data from 45+ DOTs)
- Price Forecasting (estimate in 60 s)
- Bid Items (PDF extraction)
- Drawing Notes
- Bid Forms & Signatures

Extra RBCopilot tools

- P10/P25/median/P75/P90 benchmarks with per-row confidence
- Similar projects with a 100-point score
- Plan Takeoff with AI sheet reading
- Bottom-up cost estimator
- Readiness Wizard (~20 min) and 576-field intake
- Own price bank and award history
- PDF, Markdown and CSV exports

Bidding features

RBC vs EV

Out of 21 bidding features in the matrix.

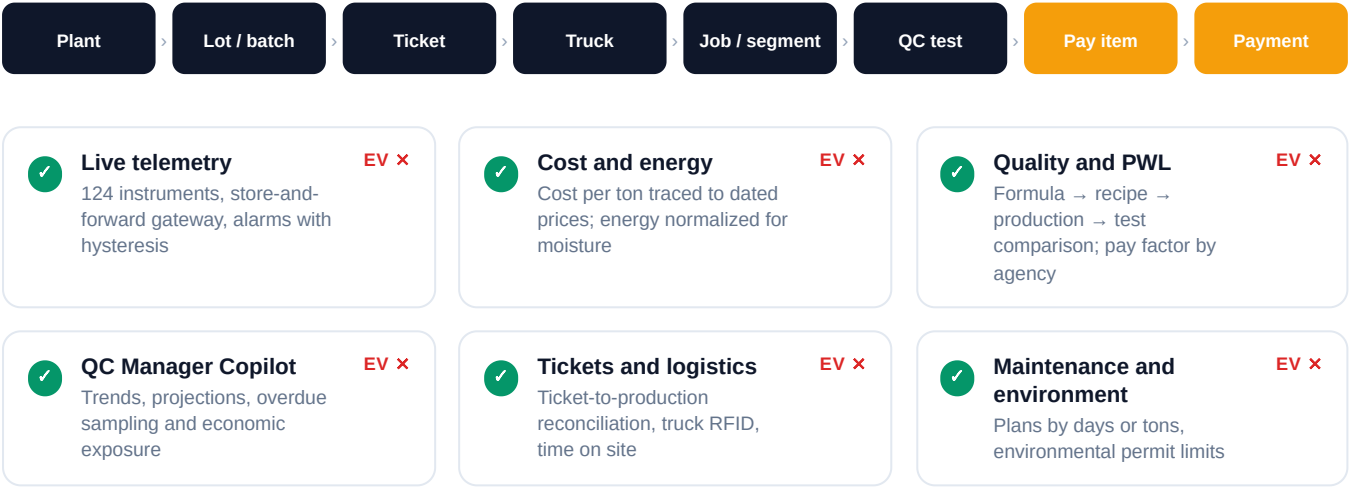

Where Edgevanta leads: number of states with historical data. That is a data asset, not a product one — and RBCopilot already lists NCDOT, GDOT, FDOT, TXDOT and VADOT as coming next.

07

ECOSYSTEM: ASPHALT TECH PRO + RBCOPILOT PRO

From plant to payment, without retyping a number

Asphalt Tech Pro connects the asphalt plant to RBCopilot Pro. Every ticket the plant issues arrives as a `material_ticket` event on the right project, along with the lot's quality result and the governing specification. **No competitor links plant, jobsite and payment in one chain.**

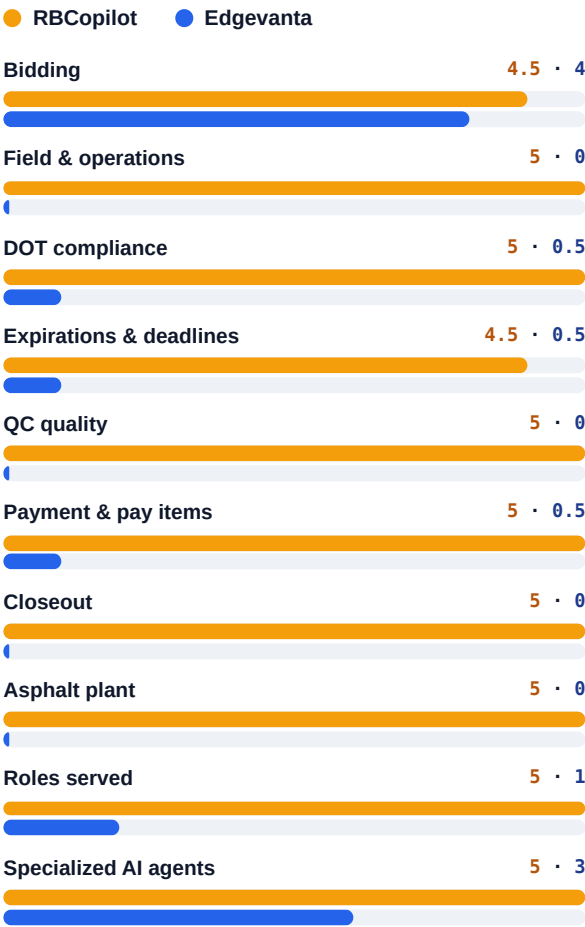

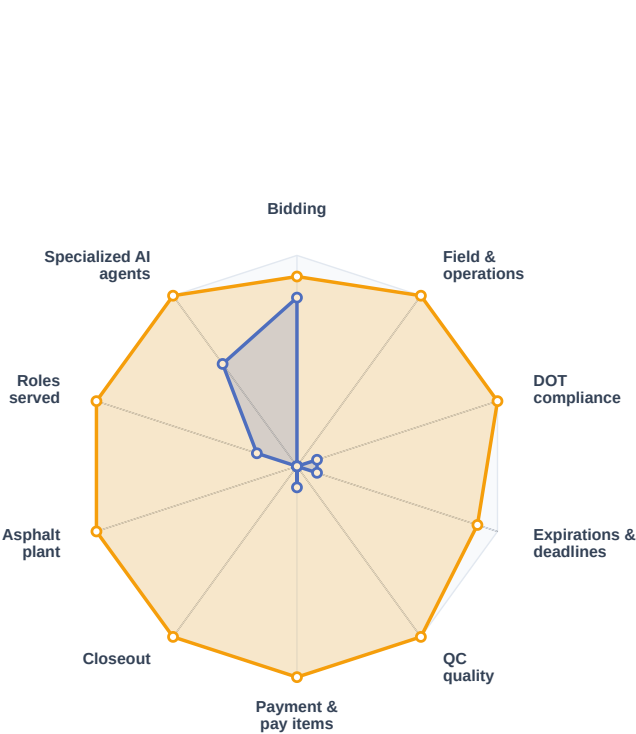

What a contractor that also makes its own asphalt gains

BENEFIT	HOW THE RBCOPILOT ECOSYSTEM DELIVERS IT	EDGEVANTA
Zero double entry	The scale ticket becomes a pay event in RBCopilot Pro, mapped once per project	No
Pay factor defense	Lot quality result and agency specification travel with the ticket	No
True cost per ton	Date-effective material prices plus actual energy and consumption, so bids use real costs	No
Root cause of a failed test	Reconstructs the production window and ranks contributors with evidence	No
Nothing gets lost	Every failed push is logged; unmapped tickets wait for assignment instead of duplicating	No

Edgevanta at the plant: nothing. It doesn't measure, alarm, reconcile tickets, or compute cost per ton or pay factor. Its only touch with asphalt is adjusting historical prices by the liquid asphalt index.

09

SALES BATTLECARD

Ten questions Edgevanta can't answer with a “yes”

Use them in every meeting where Edgevanta comes up. Each one describes a capability RBCopilot already shows in its platform.

- | | | | |
|-----------|---|----------------|---------------|
| 01 | Can your superintendent file a daily report with no signal from a rugged tablet? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 02 | Does it warn you when a \$105.18.2 claim notice expires in 36 hours? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 03 | Does it answer a field question citing the exact section of SCDOT 2025? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 04 | Does it build a claim packet with photos, events and citations? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 05 | Does it show on a map which job has critical alerts right now? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 06 | Does it track technician certifications and calibrations before they lapse? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 07 | Does it record crew hours , equipment, fleet and safety? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 08 | Does it run QC with control charts , lots and pay factor? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 09 | Does it trace every dollar to a ticket and flag underpaid items and retainage? | RBCopilot: yes | Edgevanta: no |
| <hr/> | | | |
| 10 | Does it connect the asphalt plant to the pay estimate? | RBCopilot: yes | Edgevanta: no |

Handling objections

THE PROSPECT SAYS...	RESPONSE
"We already have Edgevanta."	Great for pricing. Who protects the margin for the next 18 months? That's where RBCopilot works.
"They have data from 45 states."	Price data, yes. None of it warns you that a claim notice expires in 36 hours.
"They have pay estimates too."	Your competitors'. We document and collect yours, ticket by ticket.
"They're better known."	Known for bidding. Take the 5-minute live demo and compare what happens after you win.

CONCLUSION

They don't compete in the same category.

Edgevanta is good pricing software for estimators. RBCopilot is the DOT contractor's operating platform: from reading the bid package to collecting the last pay item, with the asphalt plant connected. Comparing the two is comparing a calculator with the system that runs the job.

49

capabilities only RBCopilot has

4.2x

more capabilities than Edgevanta

Core message

“Edgevanta helps you win the bid. **RBCopilot helps you make money on it** — in the field, in claims and on every pay estimate.”

Leave them no opening

Today Edgevanta leads on multi-state data coverage, published customer stories and content. Publishing logos, case studies with numbers and a security page removes their only arguments.

Methodology & sources

RBCopilot inventory taken from the public site and application screens at rbcopilot.com and rbcfield.com (September 2026), plus the Asphalt Tech Pro repository code. Edgevanta capabilities taken from edgevanta.ai, its changelog (April–September 2026) and public sources. “Not offered” means it does not appear in any public Edgevanta source as of this date. Scorecard values are an internal assessment.
